Borders between countries with the globalization of the World economy in recent years, import and export figures disappeared as a result of this increased. When exiting the economic crisis in the country, war and other factors are taken into consideration when the foreign trade between the countries has varied during this period and this was reflected in World import and export figures. Founded in 1923 gave new emphasis on foreign trade to this situation is to try to identify new trade policy. As the friends in the World economy in a globalization world, made with Turkey's foreign trade also understood to be a party to this agreement and must comply with the second conditions. Liberal economic policies, especially since 1980, the last Turkey began to have a say in more global basis and after this period has been one of the world's leading countries. Turkey's imports and exports of these respective periods showed changes in principle World regions.

Were studied too serve that we have done forth is purpose after this study aims to 2000 in the global World that have a say in how the Turkey in the World economy and the axis shift problem in Turkey's foreign trade since the period.
