**TITLE:** THE EFFECTS OF TOURISM ON THE INCOMES OF MUNICIPALITY  
DIDIM MUNICIPALITY SAMPLE

## **ABSTRACT**

It has come out in the last quarter century how important the incomes obtained from tourism activities are from the point of view of the countries' economies. The balancing effect that tourism activities created chiefly on payment balance in the macro level and the income effect they created on the local economies in the micro level have increased the overall incomes of all the economical units living in the region. All the private and judicial economical units in Didim region mostly get their share from periodical income effect of tourism and increase their overall incomes. Periodical income effect of tourism is one of the most important sources of income for Didim Municipality, which is a local institution of administration. In this sense, Didim Municipality has taken the effect that tourism created on the incomes of the municipality into private consideration. Depending on this, it is intended to reveal how Didim Municipality is affected by periodical tourism activities in the context of incomes.

In the study, the general framework of tourism and the income effect that it created are explained and the effects of tourism on the incomes of Didim Municipality are shown by defining the general frame and incomes of municipalities in the sense of local administrations. In the study, deduction method is applied, literature review is made and statistical data is used.
