It is aimed in this research to investigate precisely the opinions 2nd degree students and teachers together with the business managers of the internet cafes regarding the problems occurred in internet cafes and the attitude of the students towards internet cafes. The research consists of five parts as introduction, theoretical background and related researches, method, findings and interpretations, conclusions and recommendations.

This research, conducted as a type of survey thoroughly, was performed at eight primary schools and sixteen internet cafes in Gaziantep. It was implemented on total 632 students from three different social economic groups, 95 branch teachers working in primary schools and 16 internet café business managers. “Student Survey” and “Internet Café Attitude Scale” for Primary Education Second Degree students, “Teacher Survey” for branch teachers working in Primary Education and “Internet Café Business Manager Interview Form” for internet cafe business managers were used.

The data, received from surveys, attitude scale and interview forms, were explained and interpreted statistical technically by using frequency (f) and percent (%), One way Anova, t-test, where necessary Chi-Square.
