**TITLE:** The Problems which are faced by Primary School Principals while administering education programmes. (Aydin Province Example)

### **ABSTRACT**

The main purpose of this research is about what kind of problems school managers-who are responsible in management of education programmes- come face to face, where the sources of these problems come from to detect the negative effects of these problems education-teaching activities and find proposals to solve these problems because the Primary schools have important roles in Turkish Education system. Also, the other aim of this research is to help new teachers in administration by showing the sources of problems so they will be ready to start administration.

Research range of this study is composed from teachers and administrators who works in Aydin Central Districts primary schools in Autumn Education term of 2008-2009. The universe of the study population contains 1677 administrators and teachers.

according to the scale (target, content, situation of education and evaluation). “Evaluation” is the least important problem but “Content” has vital importance for administrators in their own ideas. According to the teachers ideas, administrators have very little problems in “Content” dimension but administrators come face to face problems mostly in “Target” dimension. Also problems which primary school administrators faced has showed big difference in terms of the sex and duty.
